

Dear CF Showrooms:

Please be advised that we have made a rolling engineering change to all **6202, 6502 & 6602** widespread faucets. Effective immediately, we will be shipping these items less lift knob & pop-up drain. Instead, we will be using a new drain, the **Touch Style 9050 Pop-Up Drain** (photo attached). This drain looks exactly like a standard pop-up assembly from inside the sink bowl, but instead of operating via the lift knob, you only have to touch the center plunger to open or close the drain. It is identical to the system used on the new **Miramar 48 Series** widespread.

The reason for this change is to resolve an ongoing issue where there is sometimes not enough “travel” in the lift knob assembly to fully open the pop-up drain in larger sinks or if the plumber has set the faucet too far back from the sink. With the new Touch Style Drain, the user will get a fully open drain and a secure closed drain for every installation regardless of sink size or faucet location.

During the immediate period (30-60 days) as we phase out the standard pop-up and replace with the new touch style pop-up, customer service will be calling and advising our customers of the change for each purchase order.

Regards, Jeff
