

Custom Finishes: Make Your Mark

Customization is no longer just a buzz word – it's become the norm in design; architects are tasked with differentiating every project to enhance the branding and mission statement of each client, no matter if it's a hospitality, commercial or residential project.

At Watermark Designs we understand architects' and designers' needs and we've developed a shorthand that architects appreciate. You can literally choose one from column 'A' and one from column 'B' when designing faucets and fixtures. Want a different handle? We've got over 100 to choose from. Need a custom finish – other than one of our 38 standard finishes? No problem.

You need look no further than a few of the projects we've worked on over the last few years to understand why we feel confident in saying that we are the architect's choice. We've engineered a finish that rapidly ages brass in a number of hours rather than months. We are working on a finish that looks like raw, aged iron, we have customized the shape of faucet handles for many an architect's exacting specifications, we can even create a completely customized faucet design if necessary. When architects and design professionals are inspired – we are right there alongside them, ready to actualize their inspiration.
