

Good Morning: We have a brand new oven about to launch this month and I wanted to give you a sneak peek at it. It's the replacement for the current EO/MO Discovery wall oven and it has been highly upgraded with features seen no where else. Below is a snap shot of what you will see:

- Currently the new DYO features the largest oven cell found in the world at almost 4.9 cubic feet
 - Three year bumper to bumper warranty
 - Dacor's very accurate Four Part Pure Convection system
 - Steam Clean or traditional self clean
 - Ceramic broiler / flush mounted, very hot and easy to clean
 - A variety of handle designs
 - IQ cooking application that takes the guesswork out of your baking and simplifies the start up procedure
 - Very large window with the best interior illumination
 - Reverse Airflow Cooling / doors, windows, handles, controls and cabinets all remain virtually at room temperature while in use
-
- And most importantly: this oven features a fully capable 7 inch droid driven tablet as a display. (patent applied for) Imagine watching cooking videos on You Tube or Epicurious, saving those videos, recipes or files for later use....and because its Wi-Fi and blue tooth compatible....connecting it to your home speaker system to play streaming Pandora or other music that you have saved is now possible. Anything that you can do with our handheld device or tablet, you can now do with your wall oven. It even has its own speakers.....The possibilities are endless.

I have attached a Quick Guide here for your review and I invite you to contact me if you have any questions.

Thanks very much and good selling.

Thom Tompkins , District Sales Manager
