

Changes to Model 27F & 27W Utilatwin

Mustee has announced the following changes to the #27F/W:

The appearance and dimensions will be similar to the existing model. The major changes are as follows:

- 1. The hole configuration on the 27F/W shelf will change from two (2) holes to three (3) holes. The 3 holes consist of a center 1 1/8" hole in diameter and 1" hole on either side of the center for a 4" center set faucet. The holes do not affect the integrity of the shelf and is easily covered by any faucet base and 20.600 faucet block.**
- 2. The drain in each bowl will be centered, towards the back and molded in. We will provide a new drain assembly. The same as used on the 22C and 24C Utilatwin (see instruction sheet)**

Attached is a comparison photo showing the differences.

This will be a running change starting in late December or early January 2014.
