

# Product Notification

500 TENNESSEE WALTZ PARKWAY • ASHLAND CITY, TN 37015 • 1-800-365-0024 • www.statewaterheaters.com

Date: March 21, 2017

Please note that the commercial models listed below are discontinued effective immediately. The test procedure in the revised ANSI Z21.10.3 standards, that take effect on April 1, 2017, results in these products falling out of the Category-I venting class which allows them to be vented with galvanized type B-Vent.

## The affected models are:

- Titan™ Power Gas Burner: GPG81-140N/PE(A) & GPG81-199N/PE(A)
- Booster Models-Induced Draft: SBD30-150N/PE(A) 7 SBD30-199N/PE(A)

Existing inventory of these models is covered by the previous standard and may be installed per the instructions supplied with the heater.

There should be a minimal market impact as the demand for these models has been steadily declining as our higher efficiency options continue to displace them.
