Download and Connect the Alexa App

Download the Alexa app from the Google Play or Apple Store.

- Create an account with Amazon, or log in with an existing account.
- Follow the instructions within the app for connecting your device (Echo, Dot, etc) to the app and your selected network.

You are able to connect your device to multiple networks.

The first time you connect your device, it should be connected to your home network to assure all updates are downloaded properly and to assure it will connect to a Hot Spot or Mi-Fi network. You can opt to save your password for your home network and for your mobile hot spot from the app settings. This allows you to switch between the two networks as needed.

- Within the Alexa app navigate to settings, select your device and update Wi-Fi.

If the device is going to be traveling to various locations, the best option is to connect it to a network that is with you such as a hot spot within a phone or a Mi-Fi device to avoid time connecting to public networks.

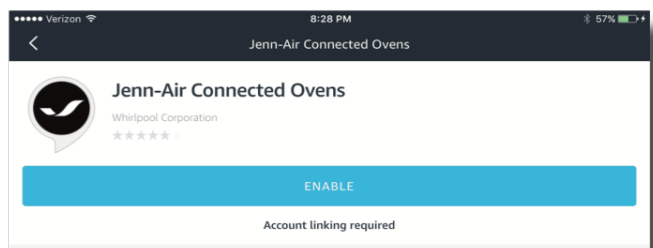

If you experience issues connecting, please reference instructions on Amazon.com for Wi-Fi and Hot Spot connectivity to your device.

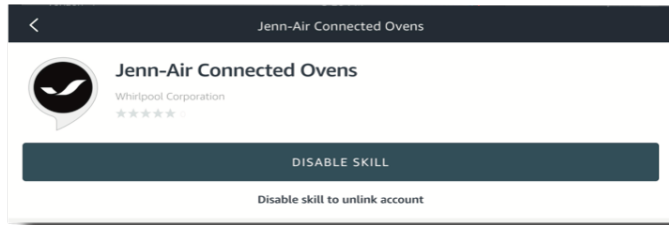

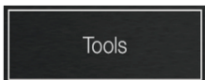

Download the Jenn-Air App from Google Play or the Apple Store on the same mobile device you downloaded the Alexa app.

- Set-up an account or log-in to the Jenn-Air app with your existing account.

Enable the Jenn-Air Skill from the Alexa App

- Navigate to Skills from the Alexa App
- Search for Jenn-Air
- Click the Enable Button
- This will take you to the Jenn-Air App; Log-in to Link the Accounts

Alexa and the Jenn-Air App are now linked.

Claim an Appliance

- Assure the Oven is Connected to a Network. If no network exists, a Hot Spot or Mi-Fi device can be used.
- From the Menu Button, Select Account Settings and Navigate to “Add Appliance”
- Select “Oven”
- Enter the SAID Number from the Control Panel of the Oven (Tools, Wireless Features, SAID)

Delete the Appliance and Restore Default Settings on Oven

If the appliance you have claimed to demonstrate use of the Jenn-Air app or Alexa device will require possible claiming by someone else, you will want to “de-claim” the appliance.

- Navigate to the appliance (can be online or offline)
- Select “Tools”
- Scroll to the Bottom, Select “Delete Appliance”
- Confirm “Delete”

Restore Default Settings on Oven

- From Tools on the Oven Display, Scroll to the Bottom and Select “Restore Defaults”
- Select Tips
- Click on “Restore”

The oven will take a moment to reset. Walk through the Welcome Screen to complete restoration process.
