# THE PROFESSIONAL'S CHOICE

## EDGE 2.0 NEXT GENERATION INNOVATION.

### Designed for three common applications: brazing, purging and pressure testing.

Traditionally, a regulator would either be a flow regulation device or a pressure delivery regulation device. With its hybrid design, the EDGE™ 2.0 ESS32 PFH800 allows a single device to operate two separate flow rates.

### Intuitive Modular Gauges

In addition, the PFH800 delivers an improved feature set and FULL VARIABLE ADJUSTABILITY, unlike any other product in the market.

### Dual Stage Orifice

To create this wide range of adjustability, Victor designed a new, patent pending dual-stage gas flow orifice to obtain the pressure and flow bands required.

### Multiple tools built into one device.

Previous solutions required a flow meter attached to a regulator.

With the fully adjustable PFH800 Pressure Flow Hybrid Regulator, you can fully adjust flow and pressure with the same product.
