

PRODUCT BULLETIN

No. WRP34-20 Date 7/14/2020

TO: BEST® Distributors, Appliance Regional Managers, Customer Service and Technical Support

FROM: Shirley Marquis

SUBJECT: New BEST® Code Ready Technology on PF6

With BEST's NEW Code Ready Technology (CRT), code compliance has never been easier!

Builders, designers and consumers should not have to compromise performance or design due to Make-up Air (MUA) regulations. We are now introducing NEW Code Ready Technology (CRT) to set the maximum blower speed to 400 CFM to address local codes or make-up air requirements with the PF6 blower. This technology complements our broad offering of MUA solutions and our industry leading on-line tool that equips professionals with the right solution to codes and requirements.

The logo below will identify the PF6 blower with the CRT option in the upcoming BEST Catalog:

Please be advised the CRT Kit for the PF6 will be included with the blower as a running change. Meanwhile, during this transition, please call our customer service to order the PF6 CRT Kit; S97021485 as required. Please refer to the attached presentation for more detailed information on how CRT is implemented and its compatible models.

Thank you,

Shirley Marquis
