Thermal Comfort
Relaxation

**Add a Thermal Comfort to
an Airbath V at NO CHARGE!**

From April 1st to September 30th, enhance your relaxation! Airbath V provides a stimulating, enveloping massage and Thermal Comfort warms your neck and upper back. Together, they make an amazing hydro-therapy health experience!

Ask your dealer for more information

Airbath V - Lateral jets

A new hydromassage option. Same great massage as the Airjet II with a different construction for drainage. Instead of a continual peripheral channel, laminated to the bath structure, this system offers air-ports connected with surgical tubing. The ports are 3" off the bottom of the bath, on the sides of the tub. The ports are 5" apart and are connected to a 1 hp blower.

Mini Lateral

The sanitary conditions of these jets are ensured by gravitational drainage and the programmed drying cycle of the blower. Each jet is designed with a center opening which releases powerful air pressure offering a complete massage to every part of the body.

Fittings available

Airbath V is the same price as AirBath II

Mini Lateral Air Jets

Jet head diameter: 13/32". Jet body: Solid brass. Length: 5/8". Central opening: 1/8".

Thermal Comfort System

The Thermal Comfort System enhances your bathing experience with a special heating pad built right into your neck and shoulder areas while you soak! Easier yet; you can simply sit in the bathtub without water and enjoy the feel of heat penetrating deeply to soothe your sore and aching muscles.

Designed with 2 heat settings and a 30 minute auto-off function, the TCS allows you to safely enjoy a bathing experience like no other!

The TCS is eco-friendly and consumes less energy than a common 60 watt light bulb. Add a TCS to your bathtub and enjoy a guilt-free bathing experience that relaxes both mind and body!
