

Innovative Solid-Surface

2021.Q4

Introducing DoloMatte™

The newest bathing solution ... exclusively from MTI

Luxurious design aesthetics ◦ Exquisite matte finish
Velvety-soft touch and feel
Non-porous surface ◦ Consistent in color and property

What is DoloMatte?

DoloMatte is an innovative solid-surface solution for bathing fixtures from MTI.

An American-made solid-surface slab is hand sanded into a velvety matte finish, thermoformed and then reinforced with a thick layer of fiberglass, resin and titanium. The backing adds strength, structural integrity and increased insulation. And it also helps keep bath water warm. The product is then hand-finished.

The solid-surface slab is a specialty polymer blended with ground minerals that is consistent in color and

property. The surface is non-porous, durable and impact/shock resistant. It is UV-, stain-, mold- and mildew-resistant. Also easy to clean and maintain. Scratches can be removed by using a Scotch-Brite pad or fine sand paper.

DoloMatte offers luxurious design aesthetics. An exquisite matte finish with a velvety-soft touch and feel. Available in white only.

DoloMatte is available on Designer freestanding tubs and low-profile shower bases.

The solid-surface slab used in the creation of DoloMatte products is manufactured by Aristech, parent company of Avonite®, who has been a leader in solid-surface products for more than 30 years. AVONITE® is a registered trademark of Aristech Surfaces LLC.
