

Why is Wine Preservation Important?

Keep it Cool

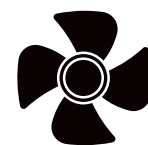

If wine gets too warm, it will age faster and the heat can distort the flavors. Heat can also ruin the wine completely, which you won't realize until you open the bottle.

PreciseTemp™ and **Active Cooling Technology** provide temperature stability and even cooling to maintain that perfect temperature. White wines are best stored at 55° - 59°F. Reds should be kept at 59° - 62°F.

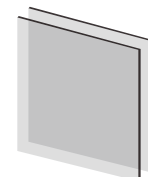

34°

Add Shade

Sunshine and bright lights are one of wine's biggest enemies, aging your bottles prematurely with their UV rays. Red wines are bottled in darker glass so they're not as affected by the light as whites and rosés, but long exposure to bright light will negatively affect the flavor of any wine.

Zephyr Presrv™ wine coolers have **Dual-Pane, Low-emission, Argon-Gas-Filled Glass**. The Low-E coated glass helps minimize the UV and infrared lights. While the Dual-Pane and Argon-Filled glass help temperature control. The **LED lighting** inside illuminates the wine safely.

Stay Fresh

When you uncork a bottle, you want to inhale the bouquet of the grapes without other smells nosing their way in. For the optimum aroma experience, it's best to find a room or corner of the house that you can dedicate to wine storage. This will ensure there are no unwanted aromas nearby to impact the wine.

Since many people like to keep their wines where they eat and entertain, this isn't always possible. A Presrv™ wine cooler with dual-pane glass doors and a carbon air-filtration system will help keep the wine cooler cavity scent-free.

Stay Still

Keeping your bottles calm is important. Wine needs to rest in a still environment until it's opened. Disruptions in the wine aging process can affect flavors and rapidly spoil or flatten the taste. Presrv™ wine coolers include a **Vibration Dampening System** that helps mitigate the effects of any shaking floors or jostling furniture nearby.

Store with Style

Zephyr Presrv™ wine and beverage coolers are ready for built-in or freestanding applications. They come in multiple sizes from compact to full size along with single zone, dual zone, french door, and outdoor models. Finishes such as stainless steel, black stainless steel or panel ready give you the flexibility to match your existing appliances.

Why Choose Presrv™?

Energy Rated and Approved

Zephyr Beverage Coolers are DoE and ENERGY STAR®* approved and can reach the ultra-cold temperature of 34°F.

As of October 26, 2019, all beverage coolers need to comply with new DoE regulations and be listed on the DoE website.

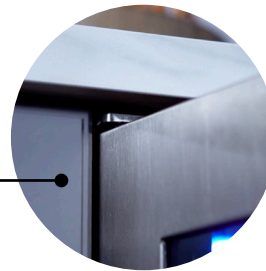

Full-Extension Black Wood Wine Racks in all Models**

Versus partial extension or wire wine racks.

Lower Height

Under-counter models have a minimum height of 33-7/8" as compared to 34-3/8" for other brands.

Zero-Clearance Door Hinges in all Models

Now Included

Demonstration Mode, Door Open Alarm, Memory Function in the Controls and Sabbath Mode with STAR K Certification.

High Quality Compressor

Ultra-quiet, more efficient, and lasts longer than the competition.

Designed with the BEST Usable Storage

- Improved bottle spacing on each rack
- Large Champagne-style bottles now fit better on specially designed 7-bottle racks
- Rack spacing between each rack increased to accommodate Pinot Noir bottles on every rack

Improved 3-Color LED Lighting**

Brighter. More even glow. No visible individual LED's.

Higher Quality Temperature Sensors to Maintain Temperatures

304 -Grade Stainless Steel

Constructed of high quality 304-grade stainless steel that is durable with welded and polished corners. Contemporary or pro-style*** handle options available.

*Not available on panel ready model: PRB24C01BPG

**Not available on outdoor model: PRB24C01AS-OD

***Not available on the black stainless steel models: PRB24C01BBSG, PRW24C02BBSG
