

ActivFlo™ Scale Inhibitor for Water Heaters

LITE

Modern water heater technology is increasingly sensitive to water quality, requiring specific conditions to achieve rated performance levels. Minerals in unconditioned water quickly form scale deposits, reducing efficiency, hot water output and equipment reliability. ActivFlo Lite inhibits hard water scale formation to ensure years of efficient water heater operation.

Features

- Designed for all water heaters; including Storage, Tankless and High-Efficiency models
- Protects and extends the life of heating elements, exchanger surfaces and other critical components
- Addresses water heater manufacturers' published requirements for scale prevention
- No salt, electricity or maintenance required
- High flow and minimal pressure drop

Specifications

Connections:	3/4" NPTF
Service Flow Rate:	12 GPM
Working Pressure:	232 psig
Max Temperature:	210° F
Warranty:	12 Years
