Evolution Pro Essential 3/4 hp	1	\$ 198.22
Evolution Pro Excel 1.0 hp (Best)	1	\$ 308.33

BECOME A PRO-CIRCLE™ MEMBER

Benefits of Pro Circle Membership

The Best Way To Boost Business

The InSinkEerator Pro Circle program was created to ensure that highly qualified plumbers enjoy a greater share of our installation and service business. As a Pro Circle plumber, you'll enjoy numerous ways to enhance your business's profitability. You'll also be able to take advantage of special promotional offers as well as various support tools and helpful business tips.

Extended Warranty Program

The free Extended Service Plan (ESP), available only to Pro Circle members, offers increase warranty coverage on select InSinkEerator products. ESP provides you with a competitive advantage and helps you recommend higher value models, which results in more profits for you.

Service Your Own Work

Plumbers have long requested the ability to service their own work. Now you can. But only if you are a Pro Circle certified plumber. This means you can service the Pro Series disposers you sell and install.

The process is efficient and costs you nothing. You'll get paid \$50 for the warranty coverage work on InSinkEerator Pro Series disposers. Not to mention you'll be continuing relationships with loyal customers. Please note that because all claims are processed electronically, a computer and Internet access are required for participation.

Homeowner Referrals

Every month, InSinkEerator receives thousands of homeowner requests for qualified plumbers to install InSinkEerator food waste disposers and instant hot water dispensers. However, InSinkEerator only refers customers to Pro Circle-certified plumbers. Which means there simply is no faster way to increase your business.

Panasonic Ideas for Life

WHO SAYS THERE'S NO FREE LUNCH?

For every two fans purchased through the end of the year, you will receive a **\$10 gift card** to McDonald's.

Add a Little Warmth for Those Cold Days

Forget about those goose bumps when stepping out of the shower on those cold winter days – this unit is equipped with a heater to add a little warmth when the temperature starts to drop. A tubular, stainless-steel-sheathed heating element features Nichrome wire with magnesium oxide for optimal heat transfer and electrical insulation at elevated temperatures.

So Quiet You Might Not Know It's On

WhisperWarm™ fans feature a totally enclosed condenser motor and a double-tapered, dolphin shaped bladed blower wheel to quietly move air. A small wheel turning very fast will create more noise than a large wheel turning more slowly for a given airflow. Our fan uses a wide blower wheel that moves a large amount of air at reduced RPMs, so it is quiet enough that you might not even know it's on.

Tired of Cold Air Coming Through Your Ventilation Fan?

This Panasonic fan has a built-in damper to prevent back draft, which helps to prevent outside air from coming through the fan. Also, thanks to our efficient, cool running motors and fluorescent bulbs, it does not create excessive heat – a common problem with recessed lighting fixtures and some competitors' fan/light combinations. Loose fill or batt insulation can be placed directly over the fan housing to prevent heat from escaping.

\$10 Gift Card With Every Two Fans Purchased!

PANASONIC BATH FANS

DESCRIPTION	QTY	PRICE
FV-08VQ3 80CFM Fan Only 0.4 SONES	1	\$ 97.00
FV11VQ3 110CFM Fan Only 0.8 SONES	1	\$110.00
FV08VQL4 80CFM Fan/Light 0.3 SONES	1	\$146.00
FV-11VQL4 110CFM Fan/Light 1 SONE	1	\$160.00
FV-11VHL2 110CFM Fan/Light/Heater 1 SONE	1	\$242.00

For every State heater purchased in November and December, your name will be put into a drawing for a chance to win a pair of Cavs tickets in January.

Value \$196.00!

C3 Technology – A Major Design Initiative

State Water Heaters C3 Technology for gas water heaters meets the standards and testing protocols established by the American National Standards Institute (ANSI) that deal with the accidental or unintended ignition of flammable vapors, such as those emitted by gasoline.

State Water Heaters use C3 Technology

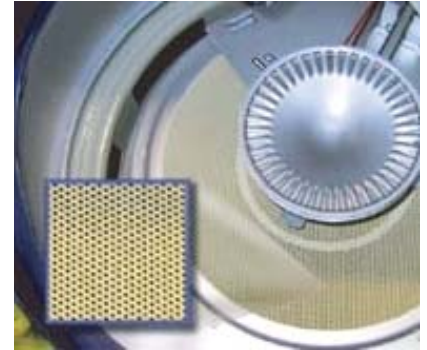

The key differentiating elements of the C3 Technology design beyond the competition are:

- Only the Corderite Flame Arrestor is fireproof, will not retain or conduct heat, and will not warp!
- The C3 Technology design incorporates a Corderite flame arrestor that has very low thermal conductive properties. It does not absorb heat and it will not warp.

The C3 Technology Flame Arrestor

Only C3 Technology water heaters feature a scientifically designed lint, dust and oil screen, which can be easily inspected and cleaned.

To prevent particles of lint, dust and oil from clogging the flame arrestor, C3 Technology water heaters are the only ones equipped with a removable LDO screen mounted in the combustion air inlet port at the bottom of the water heater. If LDO particles have accumulated, the screen can be easily removed and cleaned, using a soft cloth or warm soapy water.

The C3 Technology Air Intake Screen:
Ask at the counter for your **FREE** sample!

C3 Technology Flame Gas Water Heater Design Simplifies Parts Replacement

C3 Technology gas water heaters feature a single, self-contained pilot burner assembly, which includes the thermocouple and the temperature sensor. If service or replacement is required, there's only one part to deal with, with no guesswork as to which component is causing the problem. C3 Technology is the most contractor friendly FVIR design on the market. And of course, a design that saves the contractor time ultimately saves his customer money.

C3 Technology Gas Water Heaters Are the Only Units That Are Self-Resetting

There are a number of conditions that can deprive a gas water heater of adequate make up air for combustion. These include improper installation, air exhaust situations from attic or other exhaust fans in operation, and LDO accumulation. These can prevent adequate make up air from reaching the burner in an "FVIR" gas water heater.

When such conditions occur, the C3 Technology temperature sensor is self-resetting. In other words, if the sensor detects poor combustion conditions, it shuts down the water heater. Then, once the water heater has cooled down, the sensor automatically re-sets itself. This allows the water heater to be easily restarted, after the cause of poor combustion is corrected.
