

WATERMARK

Before

After

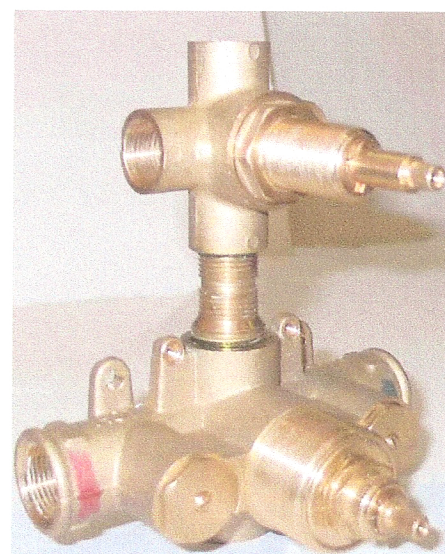

Watermark Designs has introduced it's new volume control and diverter valve in one. This revolutionary new valve:

1. Eliminates the need for extra handle trims providing a less cluttered look
2. Allows for easier installation as fewer valves need to be installed
3. Reduces costs as fewer trim pieces and valves need to be ordered

The valve is offered as a 2 way diverter (model # SS-VCWD2) or 3 way diverter (model # SS-VCWD3). Both versions allow for water to be shared between two ports so that one may enjoy water from two different outlets. The valve is also available as a yoke attached to a 3/4" thermostatic valve (model # SS-THVD2) for even easier installation and ordering.

All three versions of the valve are currently available and will be included in our new 2010 catalogue.

Please contact us or your local Watermark representative for any additional information.
