# The ice America craves.

Scotsman® introduced nugget ice to the foodservice industry in 1981, and The Original Chewable Ice™ quickly took the country by storm. Over the years, passionate chewers have gone out of their way to sink their teeth into this nugget ice at their favorite drive-in or restaurant. The new Brilliance® Nugget ice machine from Scotsman now offers the same craveable ice in a 15-inch residential model that conveniently fits in your kitchen, bar, or outdoor setting.

## SOFT AND CHEWABLE

Scotsman nugget ice is made of bits of compacted ice that are soft and chewable. The soft form also enables the ice to take on the flavor of the beverage, further enhancing the overall experience.

## Innovation and style in one convenient machine.

### GREATER ICE PRODUCTION

Production capacity is always important, particularly when you are entertaining several guests. Brilliance Nugget ice machines deliver here as well—producing over 80 pounds of ice per day. And even though it's always working, Brilliance Nugget operates much quieter than other ice machines.

### ENERGY AND WATER EFFICIENCY

Innovative technology enables Brilliance Nugget ice machines to use 40% less energy and more than 50% less water than other stand-alone, dedicated ice machines. These are particularly relevant benefits given today's heightened concerns for energy conservation and environmental responsibility.

### OUTDOOR INSTALLATION

If outdoor entertaining is more your style, you'll find the perfect solution in the Brilliance Nugget ice machine. Outdoor-approved models are available to equip your open-air entertaining area, whether on the deck or by the pool. These sleek under-counter models will meet your ice needs without taking up a lot of space.

### RELIABILITY AND PEACE OF MIND

With a Brilliance Nugget ice machine, you're always in the know. An electronic control panel clearly communicates the machine's ice production status and maintenance needs. The LED indicator informs you that the machine is on and can alert you to a no-water condition.

An ultrasonic bin level sensor stops ice production when the bin is full. Cleaning is made easier as there's no need to disconnect or uninstall the machine.

### **INTEGRATED AESTHETICS**

Brilliance Nugget ice machines complement any kitchen or home entertainment area. They have been designed with sleek new styling and virtually disappear when installed with a custom wood front that matches your surrounding cabinetry. The finish options include stainless steel, black, or white front panel kits, if a custom wood front panel is not being used. A kit is also available to adapt an existing custom wood front panel from a Scotsman ice machine onto the new ice machine.

### **MORE SMART DESIGN FEATURES**

Brilliance Nugget ice machines feature a light in the bin to illuminate the interior and a self-closing door to help reduce energy costs. They are also available with a built-in drain pump, eliminating the need for a floor drain and adding unmatched flexibility as to where they can be installed. This optional drain pump is factory installed to reduce installation costs.
