INTERCONNECT DEVICE

The interconnect device provides an emergency egress function on tubular handle sets (not mortise). When the deadbolt is in the locked position, simply turning the knob or lever will open both latches. It is especially handy in a fire or many other panic situation.

The interior door trim must be large enough to conceal an interconnect device. (Shown in photo above and on page 36 of the 2011 Emtek Door Hardware catalog/the gray price book).

The product code is #443.

This is a very nice add on feature to offer to customers!
