## IV. FREQUENTLY ASKED QUESTIONS

---

1. How do I order the faucet or the potfiller with the alternate handles?

Answer: These items have been assigned a separate part number containing the suffix “a” at the end of the Item Number. This will assure that you receive product with the alternate handles. For example, FF6080a will give you a satin nickel faucet with the alternate handles.

2. How do I switch out the handles on the faucets or potfillers?

Answer: These are easily removed without any tools. The handles screw on by turning the base of the handle. All information is included in the instructions.

3. How do I clean my Franke faucets?

Answer: Only clean Franke faucets using mild soap and a soft cloth. Use of ammonia-based products or products containing vinegar, bleach, harsh antibacterial ingredients or abrasives will damage the finish and jeopardize your warranty

4. How does the sidespray have mixed temperature?

Answer: The diverter is outside the faucet body and connects to both the hot and cold water conduits. This design has enabled complete IAMPO certification on these faucets.
